1. Basic Arithmetic and Number Operations

Fundamentals such as addition, subtraction, multiplication, and division are the foundation of most math sections. Candidates should be comfortable performing calculations quickly and accurately.

2. Fractions, Decimals, and Percentages

These concepts are frequently tested, especially in questions related to wage increases, discounts, or statistical data. Practicing conversions between fractions and decimals is essential.

3. Ratios and Proportions

Understanding ratios helps in tasks like comparing quantities, scaling measurements, or analyzing data relationships.

4. Algebraic Equations

Basic algebra may include solving for an unknown variable, working with formulas, or manipulating equations to find solutions.

5. Word Problems and Application

These questions simulate real-life scenarios, requiring test-takers to apply math concepts to practical situations, such as calculating overtime pay or union dues.

6. Data Interpretation

Candidates might need to analyze charts, graphs, or tables to answer questions accurately, requiring skills in reading and interpreting data.

6. Focus on Weak Areas

Identify topics where you struggle most and dedicate extra practice to improve these areas.

Sample Practice Questions and Solutions

Question 1: Basic Arithmetic

If a union worker earns \$20 per hour and works 40 hours a week, what is their weekly salary?

Solution:

Weekly salary = hourly wage $\times$ hours worked

$$= \$20 \times 40 = \$800$$

Question 2: Percentages

A union member's dues are \$50 per month. If they receive a 10% discount, how much will they pay in dues after the discount?

Solution:

$$\text{Discount amount} = 10\% \text{ of } \$50 = 0.10 \times \$50 = \$5$$

$$\text{New dues} = \$50 - \$5 = \$45$$

Question 3: Ratios and Proportions

The ratio of workers to supervisors in a union is 20:1. If there are 200 workers, how many supervisors are there?

Solution:

Number of supervisors = total workers ÷ ratio denominator

= $200 \div 20 = 10$ supervisors

Question 4: Word Problem

If a union's budget increases by 15% and the current budget is \$100,000, what will be the new budget?

Solution:

Increase = 15% of \$100,000 = $0.15 \times \$100,000 = \$15,000$

New budget = \$100,000 + \$15,000 = \$115,000

Question 5: Data Interpretation

A graph shows that 60% of union members voted in a recent election. If there are 1,200 members, how many votes were cast?

Solution:

Votes cast = 60% of 1,200 = $0.60 \times 1,200 = 720$ votes
