Sensors and Signal Wiring

Height Sensors (Level Sensors):

- These sensors monitor the relative height of each wheel or suspension corner.
- Commonly, they are potentiometers or variable resistors that change resistance with suspension movement.
- They connect to the control module via dedicated wiring harnesses.

Wiring Details:

- Typically, sensors have three wires:
- Power supply (usually 5V or 12V)

- Signal output
- Ground

Operation:

- When the vehicle's height changes (due to load or uneven terrain), the sensor voltage varies.
- The control module interprets these signals to determine if adjustment is necessary.

Diagram Specifics:

- The wiring diagram shows each sensor connected to the control unit via dedicated harnesses.
- Look for color-coded wires (e.g., red for power, black for ground, and other colors for signals).

Control Module and Actuator Wiring

Control Module:

- Acts as the brain of the system.
- Processes sensor signals and commands solenoid valves.

Solenoid Valves:

- These valves control airflow into the air springs.
- They open or close based on signals from the control module, adjusting air pressure.

Wiring Pathways:

- The control module connects to solenoid valves via wiring harnesses.
- Solenoid wiring often includes:
 - Power feed (often switched from the relay)
 - Control wire (from the control module)
 - Ground wire

Diagram Highlights:

- The control module wiring diagram features relays, fuses, and connectors.
- It often shows the relay controlling the compressor, which is activated when the system detects a height discrepancy.
