Question What are the main layers of the Earth's interior and their characteristics? The main layers are the crust (solid outer layer), mantle (semi-solid, convecting layer), outer core (liquid metal responsible for Earth's magnetic field), and inner core (solid metal). **Answer** How does the greenhouse effect influence Earth's climate? The greenhouse effect traps heat in Earth's atmosphere through greenhouse gases like CO₂ and methane, maintaining a habitable temperature but contributing to global warming when intensified by human activities. What evidence supports the theory of plate tectonics? Evidence includes the fit of continental coastlines, matching fossil records across continents, earthquake and volcano distribution along plate boundaries, and seafloor spreading observed via magnetic striping.
